

Function

Piston seals are designed to seal the pressurized hydraulic fluid against the atmosphere or between two pressurized spaces.

Features

- ⇒ Asymmetrical, double acting piston seal, designed with interference of the elastomer preload element on the ID and slight interference of the glide ring on the OD.
- ⇒ Glide ring in very wear resistant hard grade polyurethane (PU-D57).
- ⇒ Excellent sealing performance in low and high speeds.
- ⇒ Suitable for positioning and holding functions.
- ⇒ Negligible tendency to “stick-slip” effect.
- ⇒ Low break-away load after long standstills.
- ⇒ Good gap extrusion resistance.

Application

Reciprocating pistons in hydraulic cylinders, plungers.
 Dynamic seals in hydraulic systems.
 Max. pressure 250 bar, max. speed 1 m/s

Installation

Snap-in installation.
