

## **Function**

Rod seals are designed to seal the pressurized hydraulic fluid against the atmosphere or between two pressurized spaces.

## **Features**

- $\Rightarrow$  Asymmetrical, single acting rod seal.
- ⇒ Long sealing lip compensates for radial inaccuracy or excentricity.
- $\Rightarrow$  Useable for long stroke lengths.
- ⇒ Low break-away load after long standstills.
- ⇒ Seal design tends to "stick-slip" effect.

## **Application**

Reciprocating pistons in hydraulic and pneumatic cylinders. Replacement for seal designs (leather seals etc.) used in old cylinders. Max. pressure 160 bar, max. speed 0.5 m/s.

## **Installation**

Clamped by flange.

Seal housing recommendation			Profile description
Tolerances	[mm]		
NL	+ 0.2		
NH	+ 0.2		
ø NA	H10		Rod Seal
ø NI	f8		
Surface roughness	Rtmax [µ]	Ra [µ]	<b>RS16</b>
Bottom of groove	≤ 6.3	≤ 1.6	
Face of groove	≤ 15	≤ 3	
Sliding surface	Rtmax [µ]	Ra [µ]	
PU, elastomeres	≤ 2.5	≤ 0.1-0.5	
PTFE	≤ 2	≤ 0.05-0.3
